INTRODUCTION TO VOLUME V

VOLUME V. of the Bradley Bibliography contains the index of authors and titles enumerated in the preceding volumes and in the additions and corrections which appear in this volume; it also contains the subject index to all the volumes.

To confine the index to one volume it has been found necessary to shorten the titles as much as possible; this has been done, however, without loss of clearness. The first words of every title are always given in full and the omission of any words within the title as so given is indicated by dots. Articles in serials, like the *Botanical Magazine*, the *Botanical Register*, *Hooker's Icones* and the *Flore des Serres*, which are devoted entirely to the illustration and description of single species, have been omitted, as they are not strictly independent articles; these may be found under the name of the genus by consulting the subject index for its place in the systematic arrangement. Likewise names of plants excerpted from books or articles and appearing in the systematic arrangement as separate entries in brackets have been omitted.

Anonymous publications are arranged alphabetically under the first word of the title which is not an article or preposition, but anonymous articles in serials or periodicals published with only a botanical name as the title have been omitted, as they may be found under the name of the genus by consulting the subject index for their place in the systematic arrangement. Anonymous articles published without title in serials or periodicals and enumerated in the systematic arrangement with a supplied title are also omitted, unless they have also been issued as separate publications.

Serial publications of societies and corporate bodies will be found under the title of the publishing body, and government publications of a serial nature under the name of the country. Other publications, however, not of a serial nature, issued occasionally by societies, corporate bodies or governments are arranged alphabetically under the title of the publication to insure uniform treatment, as in many such publications taken from other bibliographies or sent by contributors to the Bradley Bibliography the name of the publishing body was not correctly given or was omitted.

This volume completes this work, the first volume of which was published in 1911. In it will be found more than one hundred thousand entries of the titles of books and articles relating to trees and other woody plants, their botanical characters, uses and cultivation. The enumeration is certainly not complete, for a bibliography of a subject so great can never be made complete, but it is believed that in the Bradley Bibliography will be found the best key to the literature of trees which has been made.

The Bradley Bibliography was begun and has been finished by Mr. Alfred Rehder of the Arboretum staff, who has devoted sixteen years of intelligent, enthusiastic and uninterrupted labor to this work.
